Mihalism Multi Host
Image hosting made easy.

Welcome to Mihalism Multi Host! The Mihalism Multi Host mission is to provide the best image hosting software in the world. Our users know from experience that no hosting script on the Internet comes close to the power that Mihalism Multi Host can provide. Mihalism Technologies' development team knows that security and compatibility are the most important parts of any software. Therefore, we have developed advanced features that are compatible with almost any systems. So, welcome to Mihalism Multi Host, we know you will love using it!

Table of Content

I. System Requirements

You will need to have the following to allow Mihalism Multi Host to operate properly:

1. Apache Web Server or any standard web server.
2. MySQL Database Server
3. PHP: Hypertext Preprocessor 5.0 (5.2.0+ is required for some features)
4. GD Graphics Library or Imagick Image Library*

** *Starred requirements (*) are not commonly found on shared hosting environments.*
** *Bandwidth tracking requires Apache Web Server with mod_rewrite. Tracking is disabled by default.*
** *Mihalism Multi Host is specifically calibrated for Virtual Private Servers (VPS) and dedicated servers, but it works fine in almost any server setup that matches the above requirements. This includes shared hosts such as 1&1, Bluehost, Hostgator, Dreamhost, etc.*

The following is not a requirement, but it is a good thing to understand. If you plan to take your image hosting service serious by hosting thousands of images, then do not go with shared hosting. Most shared hosting companies will suspend any website that comes close to using a large amount of resources. Yes, some offer "Unlimited" storage or bandwidth, but that is impossible to provide. So, before going with Mihalism Multi Host make sure that your host can handle the demand of image hosting. Slicehost is an extremely reliable service that Mihalism Technologies uses. We recommend them for anyone looking for cheap server space without having to deal with shared hosting companies.

II. Installation

The Mihalism Multi Host installer has been designed to be as simplified as possible. With it asking for only MySQL Database & Administrative information not much is needed to begin use of Mihalism Multi Host. Follow the steps presented below to be taken to the installer of Mihalism Multi Host. From there you will be presented with more information on how to continue the installation process.

1) Once downloaded, unpack the contents of the *.zip archive to a folder of your choice within your computer.
2) Now that Mihalism Multi Host is unpacked, upload the content of the folder to your web server using FTP, SFTP, or SSH.
3) If the folder was uploaded successfully into a web accessable location, then you can simply open your favorite web browser and browse to the folder within your website where Mihalism Multi Host was uploaded.
4) After you have opened Mihalism Multi Host in your browser you will presented with the installer. Follow the directions on the screen to begin installation.
5) That is it, your are done. Enjoy your website!
